Delete a backup ..... 1

# Delete a backup

You can delete a backup associated with a managed application.

Update with input from Michael with the face header.

## Before you begin

You must have the following:

- ID of the managed app that owns the backup. If needed you can use the workflow [List the managed apps](#) to locate the application.
- ID of the backup you want to delete. If needed you can use the workflow [List the backups](#) to locate the snapshot.

## 1. Delete the backup

Perform the following REST API call.

| HTTP method | Path                                                                                |
|-------------|-------------------------------------------------------------------------------------|
| DELETE      | /accounts/{account_id}/k8s/v1/managedApps/{managedApp_id}/appBackups/{appBackup_id} |

### Additional input parameters

In addition to the parameters common with all REST API calls, the following parameters are also used in the curl examples for this step.

| Parameter      | Type | Required | Description                                           |
|----------------|------|----------|-------------------------------------------------------|
| managed app id | Path | Yes      | Identifies the managed application owning the backup. |
| backup id      | Path | Yes      | Identifies the backup to be deleted.                  |

### Curl example: Delete a single backup for the app

```
curl --location -i --request DELETE
'https://astra.netapp.io/accounts/<ACCOUNT_ID>/k8s/v1/managedApps/<MANAGED_APP_ID>/appBackups/<BACKUP_ID>' --header 'Accept: */*' --header
'Authorization: Bearer <API_TOKEN>'
```
